Data Visualization with ggplot2

Load ggplot2 package, supposing it is already installed.

```
require(ggplot2)
```

Data

iris

Almost all the following exercises are based on the `iris` data, taken from the `datasets` package. It is a base package so it is already installed and loaded.

```
data("iris")
```

This dataset gives the measurements in centimeters of length and width of sepal and petal, respectively, for 50 flowers from each of 3 species of iris. The species are *Iris setosa*, *versicolor*, and *virginica*.

`iris` dataset contains the following variables:

- `Sepal.Length`: length of iris sepal
- `Sepal.Width`: width of iris sepal
- `Petal.Length`: length of iris petal
- `Petal.Width`: width of iris petal
- `Species`: species of iris

```
dim(iris)
```

```
## [1] 150  5
```

```
head(iris)
```

```
##   Sepal.Length Sepal.Width Petal.Length Petal.Width Species
## 1         5.1         3.5          1.4          0.2  setosa
## 2         4.9         3.0          1.4          0.2  setosa
## 3         4.7         3.2          1.3          0.2  setosa
## 4         4.6         3.1          1.5          0.2  setosa
## 5         5.0         3.6          1.4          0.2  setosa
## 6         5.4         3.9          1.7          0.4  setosa
```

```
str(iris)
```

mpg

Some of the exercises are based on `mpg` dataset, taken from the `datasets` package.
It is a base package so it is already installed and loaded.

```
data("mpg")
```

This dataset contains the fuel economy data from 1999 and 2008 for 38 popular models of car.

```
dim(mpg)
```

```
## [1] 234  11
```

```
head(mpg)

```

Scatterplot

Exercise 1

- Generate a scatterplot to analyze the relationship between `Sepal.Width` and `Sepal.Length` variables.
- Set the size of the point as 3 and their colour (`colour` and `fill` arguments as “green”).

Exercise 2

- a. Generate a scatterplot to analyze the relationship between `Petal.Width` and `Petal.Length` variables according to iris species, mapped as `colour` aes.

Box Plot

Exercise 1

- Build a box plot to compare the differences of sepal width accordingly to the type of iris species.
- Set the fill of boxes as “#00FFFF”, the colour as “#0000FF” and the outlier colours as “red”.
- Add the plot title: “Boxplot of Sepal.Width vs Species”

Histogram

Exercise 1

- Represent the distribution of sepal length with an histogram.
- Set bins fill as “hotpink” and colour as “deeppink”.
- Set the number of bins as 15.

Lineplot

Exercise 1

Let us suppose that the observations on flowers are taken along time, so let us consider the following dataset:

```
require(dplyr)
iris2 <- iris %>% mutate(time=1:150)
```

- Build a line plot to visualize the `Sepal.Length` along time.

Exercise 2

Let us suppose that the observations on flowers are taken along time, so let us consider the following dataset:

```
iris3 <- iris %>% mutate(time=rep(1:50, times=3))
```

- Build a line plot to visualize the `Sepal.Length` along time, according to the `Species`.
- Set linetype as “twodash”.

Bar graph

Let us consider `mpg` dataset.

Exercise 1

- Represent graphically with a bar graph, how many cars there are for each class.
- Represent horizontal bar and set bar width as 0.6

Exercise 2

- a. Represent graphically with a bar graph, how many cars there are for each class according to manufacturer.

b. Represent graphically with a bar graph, the distribution of manufacturer for each class.
